

FLIPIT

Real Estate Deal Workspace

Find properties. Research ownership. Analyze opportunities. Move deals forward.

A bright, human-centered landing page concept for real estate buyers, sellers, investors, and dealmakers.

Core promise: FLIPIT brings property discovery, owner research, deal analysis, buyer matching, proposals, and contract workflows into one organized experience.

Landing page sections

- Hero section with Explore Properties and List a Property calls to action
- Property search with address, neighborhood, ZIP code, listing type, condition, and price filters
- Feature cards for Find & Research, Analyze the Numbers, and Connect & Close
- Deal workspace showing property status, ARV, projected offer, and next step
- Document tools for purchase proposals, contract agreements, buyer outreach, and due diligence
- Responsive layout for desktop and mobile

Recommended technology path

Phase 1 — Static launch: Publish the supplied HTML on GitHub Pages. This gives you a professional public landing page immediately.

Phase 2 — Real SaaS: Deploy the backend on Render and connect a database, user accounts, property-data providers, ownership records, document storage, and e-signature services.

Important: The search and document controls in this prototype are front-end demonstrations. Live records, verified ownership, bank listings, saved accounts, and legally binding agreements require connected services and professional review.

Brand direction

FLIPIT uses vibrant coral, teal, warm yellow, soft cream, and lavender accents. The visual language is energetic and trustworthy without relying on dark AI-style gradients, neon cyber aesthetics, or generic technology imagery.

Suggested tagline

Find it. Analyze it. Flip it.
